

Individual Safety and Security Management Plan

Resilience System Design and Alignment to Standards

This resilience system has been designed by Risk and Strategic Management, Corp (RSM), a specialist company expert in designing and implementing complex resilience strategies which protect people, facilities, assets, information, operations and organizational reputation. This system has been aligned to the following ISO and BSI standards to ensure it reflects the professional standards and practices of High Reliability Organizations: ISO 31000: Risk management; ISO 22317: Business impact analysis; ISO 22301: Business continuity management; ISO 22320: Emergency management; ISO 34001: Security and resiliency; ISO 22316: Organizational resiliency; and BSI 17091: Crisis management.

Introduction

The goal of this **Individual Safety, Security and Emergency Management Plan** (ISSEMP) is to help you to understand and more effectively manage safety and security risks in a knowledge-led, scalable, pragmatic, and consistent manner. This Plan consolidates key information, guidelines, instructions, and information within a central “capture document”. It is your responsibility to ensure that the Plan is complete and contains the necessary information required to best protect you before, during and after an emergency. Where doubt exists, then it is your responsibility to seek further guidance and support.

You are responsible for tracking emergent or evolving risks and adjusting your personal safety and security measures accordingly. You are also responsible for fully leveraging all safety and security resources which are made available to you, or which are publicly available.

This Plan contains a series of Annexes which provide you with useful sources of information, contact details and checklists which will support your personal safety and security practices. You are responsible for locating localized information resources to supplement those offered in this Plan.

Section 1: General Security Considerations

It is important that you conduct personal research to understand the security and safety risks you may face. This can be achieved through pre-deployment training before travelling to a country, as well as pre-trip research before moving to remote or higher risk locations within a country.

PRE-DEPLOYMENT PREPARATION

It is your responsibility to ensure you receive security and safety briefings and materials, and access any resources made available to you, well in advance of your trip (ideally 72hrs or more before travel). You should engage with your in-country point of contact (if one exists) for any specific to program or activity and local condition considerations. You should ask questions on any points of uncertainty or concern. You are also encouraged to conduct personal research to ensure you have an appropriate level of understanding on safety, security, and cultural risks.

ARRIVAL AND COLLECTION PROTOCOLS

It is important that you understand your arrival and collection protocols so that you can safely enter the country, minimizing possible security risks before you become familiar with a new operating environment.

Collection Protocols

Individual Safety, Security and Emergency Management Plan

International Traveler

Actions on No Pickup

INFORMATION SECURITY

You should ensure that you protect sensitive information during travel, whether this is electronic, emailed, in paper format, or is shared through verbal discussions. This can be to protect your own personal safety and security by not carrying (or making available) documents and materials which could increase your personal risks, as well as protecting the actual information – should it contain government or commercially sensitive information. The following guidelines are provided:

- Ask yourself whether you need to take the information with you.
- Place laptops and documents in the trunk of the vehicle, not on the back seat, during road travel.
- Do not leave official documents, travel itineraries, or other documents accessible at an office, when staying in a hotel, or when travelling.
- Place sensitive information during travel on a flash drive and keep this with you.
- Do not leave laptops open, or visible, when unattended.
- Ensure you have password protection on your laptops or flash-drives.
- Be aware that emails and phone calls can be easily intercepted. Be careful what you say and send.
- Be careful of what you say in public, be judicious in the sharing of sensitive information.

DECISION-MAKING

It is your responsibility to ensure that you are **SAFE** and **SECURE**. As such, if you feel that someone, or something, is placing you at risk you should question this and take **THE APPROPRIATE ACTION IMMEDIATELY**. This includes if drivers are travelling too fast, or if are driving erratically. In addition, these also includes if vehicles do not have fitted seatbelts, or if a hotel lacks basic safety and security measures. If an emergent risk is identified, such as escalating social tensions, then you should determine when and how this might place you at risk and take timely action. You can either ask someone to stop behaving in a manner which could place you at risk or raise the matter with a manager for resolution. You should do this immediately.

KEY TRIP PLANNING TASKS

If you are an international traveler then the following points of consideration are recommended when planning your trip. It is your responsibility to take the appropriate actions BEFORE you depart.

- Ensure your passport has 6-months remaining on it.
- Check that your visa is up to date and will allow you to enter the country.
- Ensure you have letters of invitation and other relevant documentation.
- Scan the personal details pages of your passport, print a copy, and carry it with you.
- Send a copy of your scanned passport, invite letters and other documents to a manager.

Individual Safety, Security and Emergency Management Plan

International Traveler

- Check to see what inoculations are required, and how long before a trip you need them.
- Ensure you have mandated vaccinations in place, as well as pre-travel screening documents.
- Ensure you have all required names, phone numbers and emails you need.
- Pre-program important numbers into your mobile phone.
- Ensure your mobile phone can operate – you may need to enable international roaming.
- Ensure you have attended any required briefings and training.
- Sign up for any provided alerts and travel tracking services.
- Ensure you understand the arrival and collection protocols.
- Ensure you have copies of all flight details, itineraries, and hotel bookings.
- Ensure you have sufficient prescription medicines, contact lenses and supplies.
- Ensure you have sufficient funds for the trip – in the right denominations and years.
- Research the region and ask questions on safety, security and cultural risks.
- If possible try to get a local mobile phone and let others know the number.
- Inform your bank of where you will be travelling so that your credit cards are not locked.

If you are a US citizen then you are encouraged to register with your embassy and the STEP program. If you are not a US citizen then you should check to see if your embassy has a similar program.

STEP link: <http://travel.state.gov/content/passports/en/go/step.html>

Note: Some Islamic countries do not permit those with Israeli passports, or Israeli stamps in their passports to enter their country. You may either need two passports, or you can request the Israeli immigration department to stamp your entry on a separate piece of paper, rather than in your passport.

Section 2: In-country Travel Safety and Security

Travel safety and security is often the most important aspect of risk management as road traffic accidents and hostile targeting while travelling frequently presents the greatest risks to people.

VEHICLE SAFETY AND TRIP PLANNING

If you are in an accident while operating a vehicle during your trip you may be arrested and detained and can face the risk of long-term imprisonment. Your nationality, position, status, or personal wealth may also result in harsh fines and negative media attention. In addition, if you injure, damage, or kill a person, animal, or structure then you may face increased risks of a physical assault, including from the local community.

If you feel your driver is handling their vehicle in a manner which is unsafe you should politely ask them to slow down, or not to overtake other vehicles. If you are using a contracted or partner provided service then you should report unsafe driving practices immediately. Ensure you always wear your seatbelt when travelling and report any vehicle problems immediately. For long distance trips ensure vehicles have sufficient fuel, spare tires, a breakdown kit, and that the driver knows where to go and has a map or GPS. You may want to ask the driver questions to check these points.

For out-of-city, remote or high-risk movements you should report the details of the trip, including: [1] the planned departure time, [2] the route and alternative routes, [3] any stop or rest points, and [4] the anticipated arrival time. Ensure you report when you are departing to start the trip, when you have arrived at specific points in the trip, and when you arrive at your destination. If you change your route then you should notify a pre-determine point of contact of this change. The same process should be applied when returning from your trip.

Individual Safety, Security and Emergency Management Plan

International Traveler

TAXI CABS, BUSES, FERRIES, AND RAIL TRAVEL

LOCAL LOGISTICS AND SECURITY SUPPORT

RULES FOR TRAVEL AT NIGHT

Night travel presents a higher risk in terms of road traffic accidents and criminal or terrorist attacks.

VEHICLE SAFETY EQUIPMENT

The vehicle (certainly for long trips) should ideally have basic communications, as well as breakdown and emergency equipment. You should, if possible, confirm that this equipment is present before any long trip, or for trips through areas prone to crime or terrorist activities. You should also seek to confirm that the fuel tanks are full before setting off and commencing your journey.

Individual Safety, Security and Emergency Management Plan

International Traveler

AVOIDING SETTING TRENDS AND PATTERNS

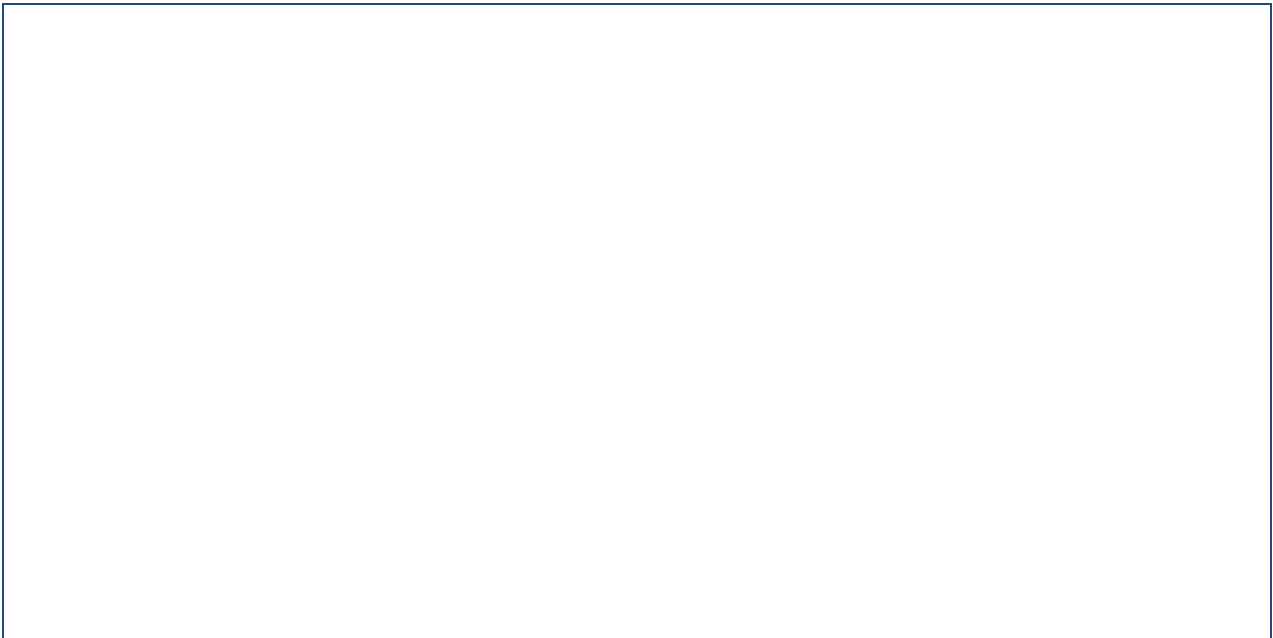

It is important to avoid setting trends which provide an opportunity for criminals or terrorists to identify a pattern which can be used to plan an attack. It is your responsibility to vary your routes, times, and activities to avoid creating predictable patterns.

- **Varying Routes:** The route to and from your residence and work area should be varied, as much as reasonably possible. Multiple route options should be identified, and these should be used randomly (where possible). You are to indicate to your driver (if provided) which route you would like to use every morning. If local threat conditions prevent a route being used (such as planned marches, rallies, or road works) then an alternative route should be used.
- **Varying Timing:** The use of different departure and arrival times can help reduce pattern setting. While it can be difficult to coordinate meetings leaving early or late (even by 10 to 20 minutes) can make a significant difference to reducing your risks of being targeted by criminal or terrorist groups. You should not be concerned if a driver has to wait 30mins for you to leave. As such, you should seek to vary departure (and so arrival) times every day by at least 10mins if you believe there is a security threat.

OUT OF BOUNDS OR HIGH-RISK AREAS

Some areas are more prone to civil disturbances, or from criminal and terrorist attacks. Where possible you should avoid markets, large western hotels, transport hubs (train and bus stations), government buildings, radio and television stations and universities. Travelling past these areas can also present a possible threat.

Individual Safety, Security and Emergency Management Plan

International Traveler

HOTELS AND GUESTHOUSES

The following hotels and guesthouses have been identified for use:

Section 3: Understanding Your Risks

It is important you understand the safety and security risks you may face. By understanding these risks then you can more easily identify, avoid, mitigate, or respond to them. You are also advised to conduct your own research using open reporting sources (see Annex B). You should raise any concerns as soon as possible.

GENERAL THREAT OVERVIEW

The risk rating for this country is assessed as:

TRAVEL RISKS

CRIMINAL RISKS

KIDNAP AND RANSOM THREATS

You should always be aware of your surroundings (situational awareness) and be observant for people watching you. If you see the same faces in different locations, or familiar vehicles, then this may present a 'warning indicator' of a potential security risk. You should report your concerns and change your routes and routine so anyone watching will find it difficult to know where you will be at any given time.

SOCIAL UNREST

You should avoid demonstrations and rallies where there is a security or safety risk. If you find yourself caught up in a political demonstration, then try to remain calm and try to move away from the area by the safest and most direct route. If you are travelling in a vehicle then ensure that the doors are locked and try to drive slowly out of danger. If you are in your accommodation and there is a demonstration nearby then remain inside in a central or rear room and away from windows – if this is the safest option. You should familiarize yourself with the security procedures in place at your accommodation, and make sure appropriate precautions are implemented as necessary. By pre-identifying key calendar dates and monitoring local media sources for upcoming or emergent events then you should have sufficient warning to take action before violence occurs.

ARREST AND DETENTION

By understanding the local laws and customs, including the differences in laws within the country, then you reduce the potential from being detained or arrested. You should always have the contact information for a local attorney on you. If you are an international traveler and are detained or arrested, then you should ask that your Embassy be informed.

Individual Safety, Security and Emergency Management Plan

International Traveler

LGBTQIA RISKS

The following provides a good source or information: <http://ilga.org/worldwide-legislation/>

TERRORISM AND MILITANCY

You should maintain a high level of personal awareness. This can include monitoring local information resources, the media and peer networks. Embassy websites are also an open-source resource to receive alerts of potential or occurring terrorist attacks.

NATURAL HAZARDS

Individual Safety, Security and Emergency Management Plan

International Traveler

SICKNESS, HEALTH, AND INJURY

PREDICTABLE RISKS

The following key calendar events or periods may affect your safety and security. You should identify likely periods of increased risk before you travel and seek to avoid these where possible.

The following provides a good source or information: <https://www.timeanddate.com/holidays/>

Section 4: Emergency Communications

You are to pre-load important phone numbers into your mobile phone and print a paper copy, carrying this on you. You are to ensure your phone is always fully charged and has at least \$25 USD of credit (or the equivalent in local currency) to enable effective communications during an emergency. Being able to communicate effectively during an emergency is critical. **You should carry your phone on you at all times (where possible) so that others can contact you.** You should ensure others also know your contact details should they need to get in touch with you.

You should ensure you have as many means to communicate as possible – including: [1] international roaming mobile phone, [2] local mobile phone, [3] emails (laptop or internet café), and [4] VIOP (internet). If your communication options fail then you should quickly identify others to reestablish communications. **In an emergency offer to pay a local national to use their phone!**

CHECK-IN REPORTING PROTOCOLS

Check-in protocols support your personal safety and security ensuring that assistance can be provided in a timely manner. You can text, email, or phone in your status at designed points, including:

EMERGENCY SITUATIONS - COMMUNICATING

If you experience ANY form of emergency – ***or are near a location which has suffered a serious and media worthy humanmade or natural crisis*** – then you are to immediately contact your designated point of contact and notify them of your location and status, even if you are not at risk.

It is always better to alert people early so that if a situation does become more serious the team is ready to respond to your needs. People may also be concerned and mobilize a response if they believe you are at risk, even if you are safe and are physically removed from the threat – this can place others at risk if they come to your rescue when you are actually safe, or you may create significant unnecessary management effort as a response is mobilized.

You should check in when: [1] the threat conditions change, [2] where threat alerts and notifications are released, [3] where the media reports a threat or emergency in your area, and [4] when others you and your organization knows are impacted by an emergency. You are to ensure your laptop and phone are fully charged while power lasts – and should turn off all IT to conserve energy until the report in time.

Section 5: Medical Emergencies

It is important to identify appropriate medical resources ahead of sickness or injury. You should have your insurance details to hand so these can be quickly activated. The following medical resources have been identified for potential use – *you should confirm whether these are approved by your insurance provider:*

PRE-IDENTIFIED DOCTORS

You should seek to engage a doctor through the insurance provider unless it is an emergency. The following have been identified in case of an emergency, and outside of those approved by the insurance provider:

Note: If you utilize medical treatment outside of an insurance policy then the insurance company is not necessarily obligated to cover these costs.

Section 6: Hibernation and Evacuations

Where security or safety conditions are deteriorating you may need to hibernate (remain in a safe place) or evacuate (depart the area either locally or nationally). Relocations occur where you have identified a risk sufficiently in advance to leave the area before an emergency occurs. A hibernation or evacuation decision may be triggered by upcoming political events such as elections and referendums, religious or politically sensitive holidays, contentious commemorative dates, or due to rallies, demonstrations or a general breakdown of law and order, or due to an armed conflict between two countries. Pandemics, floods, forest fires, earthquakes and other natural disasters may also trigger a hibernation or evacuation decision.

Local Evacuations	Safe Havens	National Evacuations
If a local evacuation is triggered then you may need to move to a safe area of the town or city where you reside or work, or to a nearby town or region where the risks may be less.	If you are in a hibernation situation then you will need to find a safe and secure place to stay. This is known as a “Safe Haven”. You should identify – <i>and communicate to others</i> – designated Safe Havens where you live and work, as well as those in other towns or cities should you need to implement a local evacuation.	If a hibernation and local evacuation solution does not ensure your safety and security you may need to evacuate from the country. A national evacuation will require careful coordination with both local stakeholders as well as your headquarters management team. Rarely would you be expected to coordinate your own national evacuation. National evacuations may be conducted through an air lift (commercial, routine, chartered or military), through a maritime extraction, or by a border crossing.

Note: See mapping for locations.

Evacuation routes should be color coded on a map to help visualize the route you will be using. You should confirm the route with your driver before you start to evacuate, communicating this to your designated point of contact so that your status and activities can be better managed – and so that support can be mobilized to assist you if necessary. You should ensure your mobile phone has sufficient credit and is fully charged so you can communicate throughout the evacuation process. You should conserve power by turning off IT and phones until your reporting time, or when you need to report any serious matter outside of scheduled reporting. **You should report any changes to your plan immediately.**

The following Safe Havens have been identified:

--

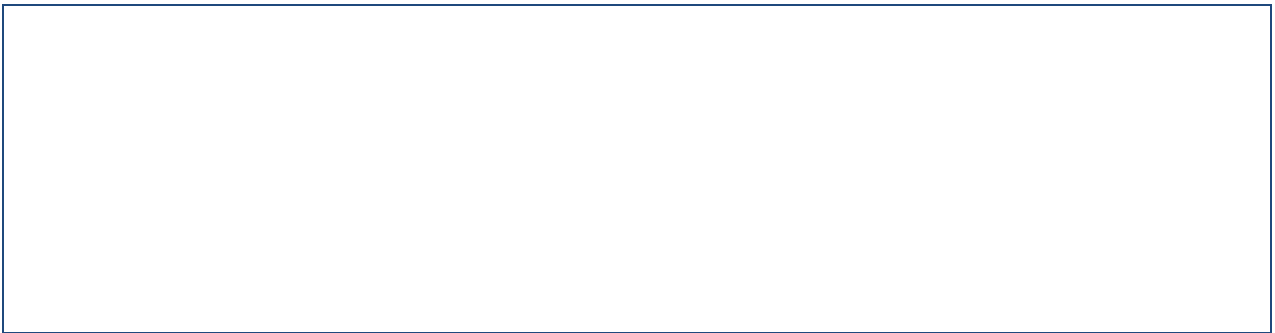

Individual Safety, Security and Emergency Management Plan

International Traveler

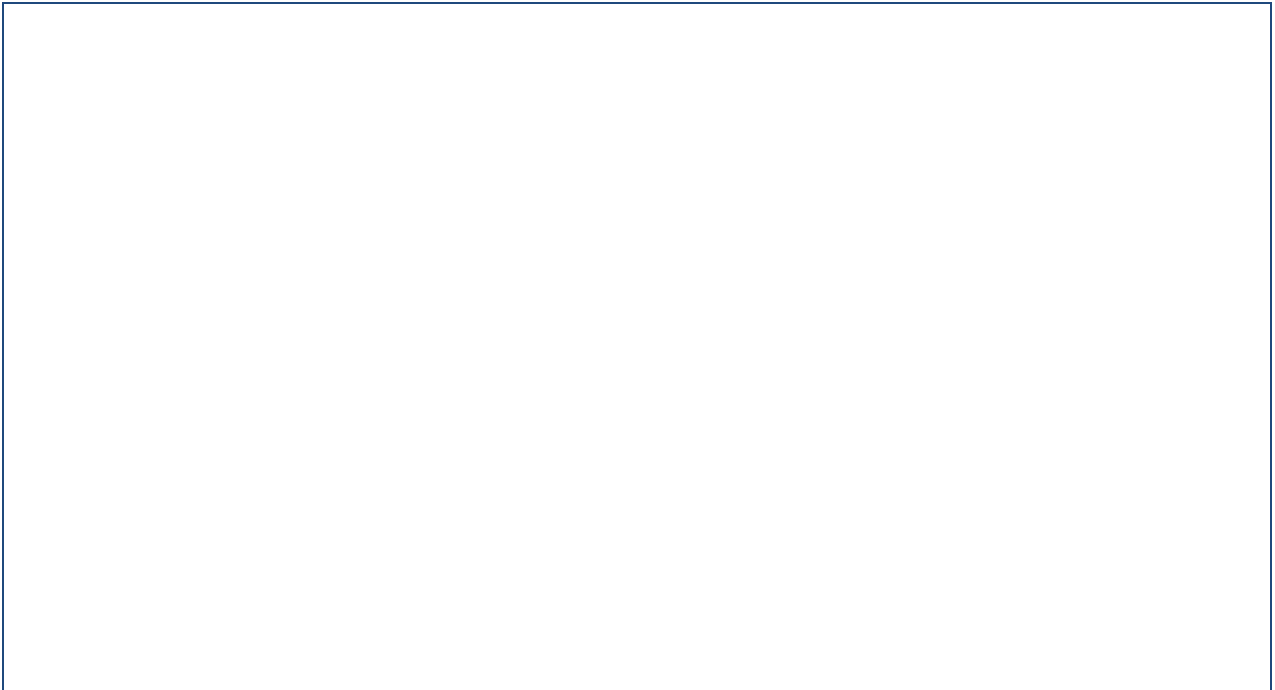

The following air evacuation options may be used during an emergency:

The following maritime evacuation options may be used during an emergency:

Under certain conditions overland evacuation to border crossing points may be required. Land evacuations can be complex and may require visas to allow for border crossings, as well as logistics and security support to ensure the safe passage of people through an affected country and into a safe bordering country.

Annex B: Safety and Security Information Resources

The following sources of information can help you understand the safety and security risks you may face:

Note: You should supplement this list of resources through personal research.

Annex C: Safety and Security Guidance

The following are some basic safety and security considerations for your trip.

- Register with your embassy (smart traveler system – STEP program for US nationals)
- Carry a map with key locations such as hospitals, embassies and safe havens marked on it.
- Load emergency contact numbers into your international (and local) mobile phone.
- Do not wear clothing with flags, symbols or insignia which might draw attention.
- Do not have your home address listed on luggage labels.
- Dress appropriately for the culture and environment.
- Carry a phone with international roaming capabilities.
- Procure a local sim-card for extended visits or work.
- Carry the details of any insurance carrier as well as their contact numbers.
- Research the area(s) you are visiting: understand the risks and areas or activities to avoid.
- Inform trusted people of your plans (family, friends, and work colleagues).
- Check in on a regular and scheduled basis.
- Select hotel rooms on the 3-5th floors and facing away from main streets.
- Avoid travelling at night in higher risk environments.
- Coordinate your activities with any in-country security, logistics and administrative support.

Robberies

- Hand over your possessions... you can replace them.
- Do not be aggressive or confrontational.
- Tell people that you expect friends to come soon, if you are alone.
- Shout “FIRE” if you are being assaulted.

Gun Fire

- Take cover behind hard solid objects such as solid walls, large trees, dirt banks and vehicle engines.
- If you need to move then try to zig zag and run short distances.
- Be aware of ammunition ranges, these are typically 50 meters to 1,000 meters or 150 to 3,000 feet.
- Drive out of an ambush – reverse, turn or ram the attacker. If shot at get low behind the steering wheel.

Rockets and Mortars

- Understand that “bracketing” may occur.
- Mortar rounds usually land in groups and not as single shells.
- If a bomb does not detonate it does not mean it is safe.
- Hide behind hard objects or get into ditches.
- Wait 15min after the last explosion – a “soak time”.

Civil Disorder (Riots)

- Move away quickly, but without drawing attention (do NOT run).
- Do not be a spectator. If in a building move away from the windows.
- Inform others of the threat. Warn them to stay away from the area.
- Tell people where you are and your status. Keep them updated.
- Lock windows, gates, and doors, and move to the rear of a building.

Suspect Devices (Bomb Threats)

- Letter bombs may be heavier than usual, stained and may smell.
- Parcels may be lopsided, have stains, wires, and excessive postage.
- Do NOT use a radio or cell phone within 50 meters or 150 feet.
- Cordon and clear the area – stop people reentering the area.
- If it can see you then it can hurt you!

Safe Distances

Armed Attacks

- Lock and barricade your room.
- Move into a bathroom and consider escape routes.
- Turn off the TV, radio and turn your phone to vibrate.
- Move away from doors and windows (consider gunfire angle hazards).
- Alert rescuers to your location – keep your hands up and do not run.

Arrest and Detention

- Stay within a group if possible.
- Alert a lawyer or your embassy.
- Ask for police credentials and ID details: pass these to others.
- Always be polite, do NOT admit to anything (wait for a lawyer).
- Pay fines... but not bribes, *receipts may not be available*.
- Inform someone of your situation – leave the phone on.

Earthquakes

- Take shelter under a solid object – such as a table or in a doorway.
- Turn off power and gas supplies, be careful when during electrical items back on.
- Do not use bridges or tunnels as these may be damaged and can collapse.
- Be careful of electrical hazards, especially in standing water.
- Be careful of falling hazards – look up.

Severe Flooding

- Move to upper floors or high ground.
- Use sheets to alert others of your location.
- Take water and food to higher building floors.
- Take essential supplies with you: medicines, warm clothing, lighting batteries etc.
- Be careful of underwater obstacles and contaminated water.
- Be careful of contaminated drinking water.
- Be mindful of dangerous animals and reptiles.

Severe Storms

- Stay away from windows – try and move into the center of buildings.
- Be aware of flying debris and fallen power lines.
- Listen to the TV and radio for alerts and instructions.
- Power up laptops and phones before a storm strikes: conserve batteries.
- Conserve water and food – fill bathtubs and containers.

**Ask questions if you have any
doubts or concerns!**

Annex D: Personal Medical Details

You may not be conscious following an accident and your medical details may need to be provided by a local colleague, your home office, or a local support team to a doctor treating you. As such, the following key medical details should be provided to aid in your treatment. This is optional and should be provided to a person you feel comfortable sharing the information with. You can also have this information in a sealed envelope and left with a trusted person – to be opened only during an emergency.

Blood Group
Pre-Existing Medical Conditions
Medicines Used
Allergies
