
LIMIT ACTIVATION PROTOCOL

There are 5 stages within the Local Incident Management Team (LIMT) activation and response sequence (used in conjunction with the safety, security and emergency management documents and working in partnership with the headquarters Crisis Management Leadership Team (CMLT) for serious events).

Stage 1: Notification

- The initial notification of the event is received from the point of crisis
- The sender's details are confirmed, and the incident facts are gathered (and confirmed again)
- The LIMT is activated through the Incident Notification System (verbal reporting and SITREPs)
- Other stakeholders (internal and external) are identified and engaged

Stage 2: Mobilization

- The LIMT is convened, and the Team Leader assumes control
- The CMLT at the headquarters office are notified for serious incidents (especially level 1 or 2)
- The LIMT members review (refresh) their roles and responsibilities
- Other locations and the Security Function and staff are notified of the situation

Stage 3: Respond

- The Team Leader provides the CMLT with ongoing updates, permissions, and requests for support
- The Security Function (and designates) support the LIMT Team Leader with response protocols
- The required policies, plans, guides, and procedures are identified – the LIMT is refreshed on these
- Any 'Just in Time' training needs are identified for the LIMT and for staff and support staff
- The Event Files are started (storing emails, reports, and documents)
- A Cost Code is defined for the emergency to track and recover costs
- The immediate threats and associated Courses of Action are confirmed and managed
- The *Crisis Communications and Stakeholder Plan* is consolidated, and stakeholders are engaged
- Immediate support and resource needs are identified and engaged
- The *Emergency Action Plan* and other relevant response plans are activated

Stage 4: Manage

- The threats and associated Courses of Action are monitored and adjusted
- Support and resources are engaged and managed
- Information channels and reporting systems are confirmed and implemented
- Funding and financial controls are implemented, and expenditure authorities issued
- Planning for transition and recovery starts
- The LIMT Team Leader delegates roles, responsibilities, tasks and timelines
- The Event Files are maintained by the Security Function and sent to the CMLT Recorder
- Stakeholder management is implemented: scheduled and event driven briefings are conducted

Stage 5: Transition

- The End Point is confirmed, and any residual tasks captured in a *Transition Plan*
- Resources are demobilized once the situation is stabilized
- All files are consolidated in the Event Dossier
- An After-Action Report is developed: lessons learned, and corrective actions are implemented
- Costs are consolidated and reimbursements are sought
