

Office Safety and Security Plan

Resilience System Design and Alignment to Standards

This resilience system has been designed by Risk and Strategic Management, Corp (RSM), a specialist company expert in designing and implementing complex resilience strategies which protect people, facilities, assets, information, operations and organizational reputation. This system has been aligned to the following ISO and BSI standards to ensure it reflects the professional standards and practices of High Reliability Organizations: ISO 31000: Risk management; ISO 22317: Business impact analysis; ISO 22301: Business continuity management; ISO 22320: Emergency management; ISO 34001: Security and resiliency; ISO 22316: Organizational resiliency; and BSI 17091: Crisis management.

MAIN THREAT CONSIDERATIONS

It is important for managers to evaluate the likely threats which the facility and its occupants may face to determine the safety and security measures required.

Insert here

Insert here

PERIMETER SAFETY AND SECURITY FACTORS

Perimeter security defines the boundary of a facility in physical and psychological terms. Physical security measures should deter entry from unauthorized personnel, prevent observation, slow or stop entry, and allow any persons or vehicles entering the grounds of a facility to be controlled. Vehicles and people may also be searched or have their possessions searched.

Insert here

Insert here

SECURITY LIGHTING

Lighting provides a safety and security measure to prevent accidents as well deter or detect unauthorized access to the grounds of a facility, or into the facility itself.

Insert here

Insert here

SECURITY CAMERA SYSTEMS

Security cameras (CCTV) can be used for monitoring facility perimeters, within the grounds, at access control points, or within interior spaces for safety and security purposes.

Insert here

Insert here

INTRUDER DETECTION SYSTEMS AND PANIC ALARMS

Security alarms (Intruder Detection Systems or IDS or panic alarms) can be used to identify people entering the grounds of a facility, seeking to breach doors and windows to enter a building, or seeking to enter a specific room or area. Alarms may be silent or audible, and they may be independent or linked to an alarm centre.

RESTRICTED OR CRITICAL AREAS

Insert here
Insert here

FIRE SAFETY

Fire alarms and suppression systems should be located at points to best detect smoke and fires and to enable staff to respond to a potential fire. Batteries on alarms should be checked on a scheduled basis as should fire suppression systems.

Insert here

Insert here

SECURITY PERSONNEL

Security personnel may be required to control access to the facility, to patrol the grounds, limit access to buildings or secure important rooms or areas. Guards may also inspect vehicles and search people and are part of the facilities emergency management team. Guards may be armed or unarmed. They may be issued radios or mobile phones, flashlights, batons, and other equipment to support their role. They may be hired directly or may be provided by the Landlord.

❖ **Reference the Guard Force Standards and Orders**

OFFICE SAFETY EQUIPMENT

Medical equipment may be placed within a facility to deal with accidents, injuries, and illnesses. Medical equipment should reflect likely hazards or threats and should be checked on a scheduled basis.

BADGING AND VISITOR CONTROLS

The following badging and visitor controls are in place:

Insert here

Insert here

LOCK AND KEY SECURITY AND DATA PROTECTION

Locks for gates and doors should reflect the threats of the operating area. Locks may be opened by keys, cards, or code numbers. Lost keys may require locks to be replaced. Changes to staff or employment terminations may require cards to be deactivated or door codes to be changed.

APPENDIX 1: GATHERING POINTS

The facility should have a predefined Muster Points and Safe Haven where staff can meet and shelter during an emergency. If staff are required to exit the facility safe routes and external muster points and Safe Havens should also be pre-identified.
