Route Description (includes stop points, safe havens, and points of concern)

Insert here
Insert here

Key Notes: Ideally the vehicle should be inspected 48hrs before departure for serviceability. Breakdown and emergency kits should be inspected 12hrs before departure. The vehicle should be fully fueled at the start of a long-distance trip. Communications should be tested 1hr prior to departure. The risk conditions reviewed 24hrs and 6hrs before the trip starts. The driver should formally check out when departing, check in at pre-defined checkpoints, and then check in when arriving at the destination. Any deviations from the planned route should be reported immediately.

ROUTE MAP (IF REQUIRED)
