Prevention of Fraud, Waste, and Abuse

POA has implemented rigorous financial management and internal control systems specifically designed to support the detection and prevention of fraud, waste, and abuse of U.S. Government resources. These systems include segregation of duties, multi-level review and approval processes, real-time expenditure tracking, automated alerts for irregularities, and periodic internal checks. POA uses Sage Intacct, a secure, cloud-based accounting platform that ensures transparent, auditable, and timely financial reporting. This enables automated workflows, role-based access controls, and detailed documentation of all transactions, which together help identify anomalies, enforce compliance, and deter misuse of funds. To further reinforce accountability, POA is subject to an annual Single Audit under 2 CFR 200 Subpart F, and conducts routine internal reviews and spot checks at both headquarters and field levels. All staff with financial responsibilities receive regular training on fraud prevention, U.S. Government cost principles, and POA's internal policies. Preventive measures include monthly financial reviews with project directors, oversight of procurement and subawards, ongoing reconciliation of accounts, and detailed documentation of all expenditures. These processes create multiple checkpoints that enable early detection of discrepancies or noncompliance. The Finance and Administration (F&A) department, staffed by experienced professionals with over 50 years of experience in financial oversight. This team works with project and country teams to monitor spending, confirm allowability and allocability of costs, and ensure full compliance with 2 CFR 200, local regulations, and POA's policies. POA's current

NICRA, approved by USAID, sets an indirect cost rate of 28.28%. For this Agreement, POA is voluntarily committing to a reduced indirect cost rate of 20% to maximize direct program funding. POA affirms that the decision to charge a reduced rate is made solely by POA and that FAS/USDA did not encourage or otherwise influence POA's decision to charge a reduced rate. POA acknowledges that 20% is the indirect cost billing rate currently applicable under this award, unless modified by mutual agreement in the event that POA receives a revised NICRA approved by its Cognizant Agency.

Cost Effectiveness

POA's budget has been developed considering cost-effectiveness to support and achieve key objectives. The project's budget components were designed to build long-term human capital and leverage private sector resources. The project is cost-effective, namely because of the demand-based nature of activities and interest from the government and private sector, in support of activities. All costs within the budget are deemed reasonable, allocable, and necessary to project implementation for MGD Honduras as they directly related to the activities outlined in the Plan of Operations and contribute to achieving the project's components efficiently and effectively. Prices are based on quotes, research, and POA experience to determine their fair market value. This ensures that resources are utilized responsibly, promoting transparency and accountability.

  Pursuant to 2 C.F.R. § 200.320(c)(2) and consistent with FAR 6.302-1, POA requests approval to engage FEREMA as a sole-source subrecipient under the USDA McGovern-Dole Honduras project. POA conducted market research through consultation with the Ministry of Education, engagement with donor groups, and an independent review of national education organizations, which confirmed that FEREMA is the only Honduran institution with the technical capacity and readiness to implement an evidence-based targeted instruction approach to reduce learning loss and improve literacy outcomes. FEREMA received direct training from Pratham, the international pioneer of the Teaching at the Right Level (TaRL) methodology, and began adapting TaRL to the Honduran education system, providing support to update the GANE guides, making it uniquely qualified to deliver targeted instruction and remediation at scale. This specialized expertise is further reinforced by FEREMA's more than 25 years of experience in education policy development and program implementation, its proven record of training teachers and administrators, and its ability to convene multi-sectoral stakeholders, including private sector partners, to support education reform. No other local entity combines this unique technical expertise and institutional credibility; engaging an alternative partner would require substantial investments in training and capacity-building, resulting in higher costs and reduced effectiveness. A noncompetitive award to FEREMA is therefore in the best interest of the U.S. Government, ensuring efficient, cost-effective implementation of McGovern-Dole interventions—particularly Objective 2: Strengthening access to quality education and improving literacy outcomes for school-aged children through teacher, administrator, and community training on pedagogy and quality instruction.
